

RANSOMWARE is gaining momentum.

Over half of all organizations are moderately to not at all confident in their overall security posture.

54% of cybersecurity experts anticipate a successful attack on their organizations within a year.

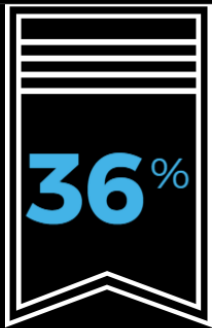

41% of attacks disrupt business activities with a 33% decrease in employee productivity.

59% of organization lack expert security staff to assist with threat mitigation.

40 days is the average amount of time an attacker can dwell on your network undiscovered.

36% OF ORGANIZATIONS TAKE A WEEK OR MORE TO RECOVER FROM AN ATTACK.

76% IDENTIFY RAPID IDENTIFICATION AND REMEDIATION OF ATTACKS AS CRITICAL.

Here's how it starts

So, one of your users clicks on a link in an email and just like that, their machine is infected. As you're alerted about the incident, and in the hours to come, your files are being encrypted and your systems are locking up. Your organization is in chaos, sometimes for weeks. You receive a ransomware message demanding you to pay in exchange for your data.

Paying criminals a ransom doesn't guarantee you'll get your data back and you don't know how far they have penetrated your network. They may have planted seeds elsewhere looking for valuable data or leaving the door open for future attacks. You need expert help.

What now?

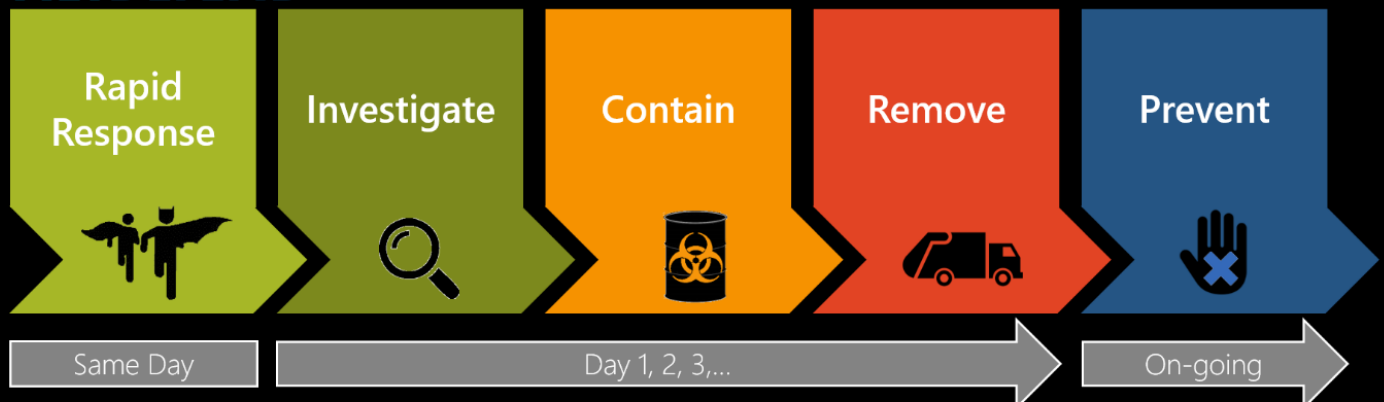

Don't pay the ransom!
